Education

Indian Institute of Technology, Roorkee

July 2023 – May 2027

Bachelor of Technology - Production and Industrial Engineering

Technical Skills

Languages: Go, Python, C++, C#, JavaScript/TypeScript, PHP, Solidity, SQL

Development: Linux, Docker, Kubernetes, AWS, RPC, Distributed Systems, Networking, Concurrency

AI Infrastructure: LangGraph, LangChain, Knowledge Graphs, Context Engineering, RAG, Inference Engineering

Experience

Athira (Stanford-based Startup)

July 2026 – Present

Machine Learning Engineer

- Architected a **knowledge graph** and **hybrid RAG system** integrating heterogeneous data sources with **vector embeddings, confidence scoring, and lexical, fuzzy, and semantic retrieval** for context-aware AI applications
- Designed and owned modular **multi-stage LLM orchestration workflows**, with independently validated and extensible stages for scalable, reliable execution of complex tasks

Nava (formerly Kluisz.ai)

May 2026 – July 2026

AI Infra Intern

- Refactored **agent orchestration** into a **single-loop runtime** backed by **context-graph capability retrieval**, replacing multi-handoff prompts with **compact service/action context**
- Designed a **Git-like temporal memory** for knowledge graphs, reducing **historical entity growth from $O(N^2)$ to $O(\text{cadence} \times N)$** through **diff-based versioning** while supporting **temporal queries** and **scoped retrieval**
- Integrated **DCIM entities**, **Redfish observability**, and **event-driven state ingestion** into the knowledge layer
- Researched **LLM inference systems** and designed **simulators** to analyze **TTFT, TPOT, throughput, KV-cache behavior, and serving tradeoffs**

Google Summer of Code - The Honeynet Project

May 2025 – September 2025

Software Developer Intern

- Enhanced **Glutton**, an open-source honeypot used for large-scale threat intelligence, built structured **iSCSI protocol parsers** to extract **high-fidelity request metadata for downstream analytics**
- Implemented a **TProxy-based streaming passthrough**, capturing metadata without disrupting active sessions
- Built **protocol-aware request parsers** and live packet introspection modules in a **high-throughput honeypot**

Projects

Keystone  | *Distributed Systems, Go, RPC, Concurrency*

January 2026

- Built a **Go-based distributed key-value store** with versioned conditional writes, atomic reads, and **compare-and-swap semantics** for **concurrent state coordination**
- Implemented a resilient client abstraction handling **RPC retries, network failures, and ambiguous operation outcomes** to improve **correctness under partial failures**
- Designed a **client-side distributed lock** using **CAS-style conditional updates** over the KV store

Controlled Multi-Agent Task Orchestrator  | *Python, Agentic AI, Orchestration*

January 2026

- Designed a **state-driven plan-and-execute agent** runtime with a **central orchestrator** controlling task decomposition, execution flow, and completion criteria
- Built specialized agents for **clarification, planning, and execution**, with phase transitions and stop conditions
- Structured the workflow around **deterministic orchestration boundaries** to improve **reliability** and **control**

Achievements

- Won **DIMO- Best Gig Economy Solution** and **Sign Protocol Pool Prize** at **EthOnline 2024**
- Won **Privacy & Scaling Explorations (PSE)- Best Use of Anon Aadhar** at **EthIndia 2024**
- Ranked **51st worldwide** and **6th nationwide** at **UIUCTF 2024**- Part of team # **ky\$1**
- Ranked **8th nationwide** at **HackCTF 2024**- Part of team # **ky\$1**

Leadership / Extracurricular

SDSLabs

May 2024 – Present

Additional Secretary

Indian Institute of Technology, Roorkee

- Involved in developing, deploying and maintaining various software applications for the campus and open-source
- Conducted multiple lectures, hackathons, and discussions to foster the technical culture on the campus
- Participated in various Hackathons and Capture The Flags (CTFs) for the SDS Labs team
